User Documentation: Secure Password Manager

1. Setup

1. Download and extract the project folder.
2. Open the folder in Visual Studio Code.
3. Open the VS Code terminal in the project directory.
4. Run the setup script:

```
python setup.py
```

The script functions to create the virtual environment. It also installs the required libraries, and initializes the SQLite database.

2. Start the Application

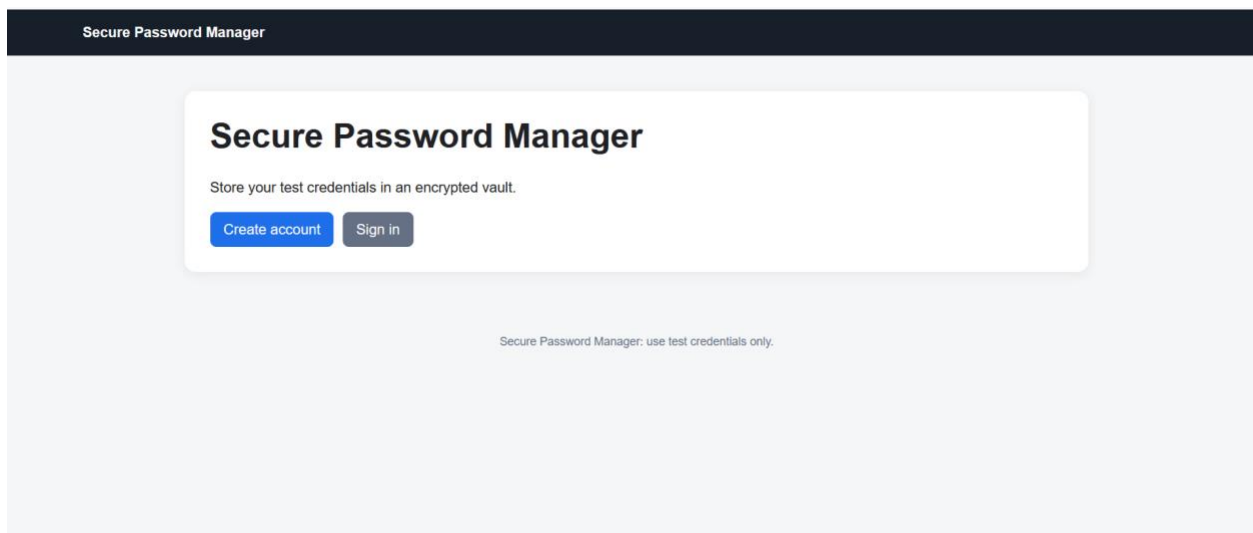

Run:

```
.venv\Scripts\python.exe app.py
```

Open a browser head on to:

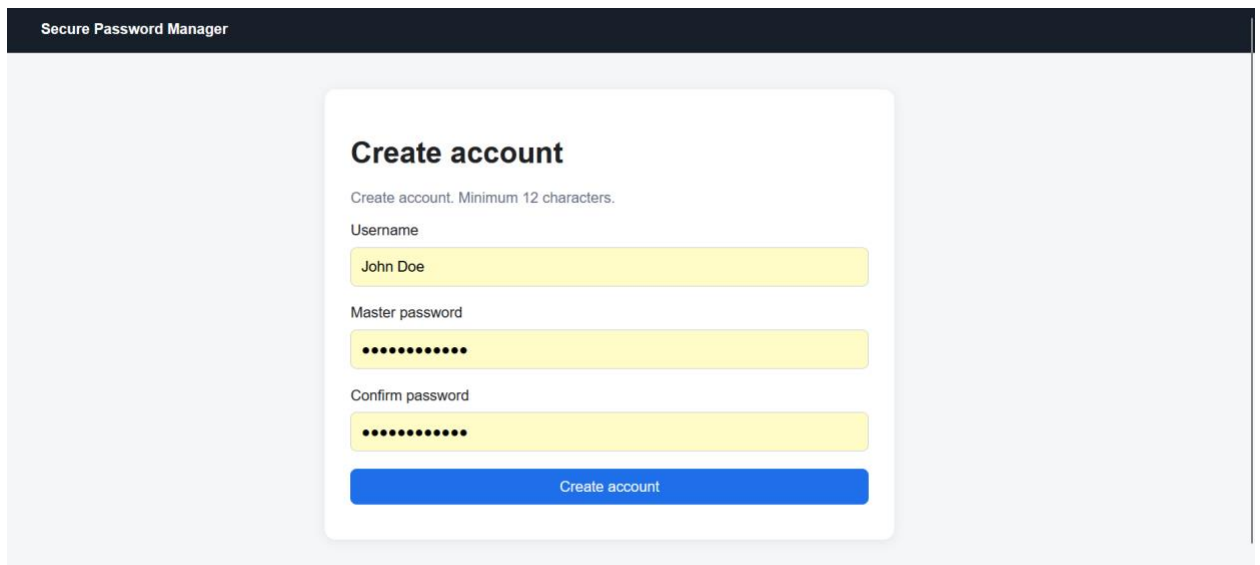

<http://127.0.0.1:5000>

You'll arrive in the following landing page:

3. Create an Account

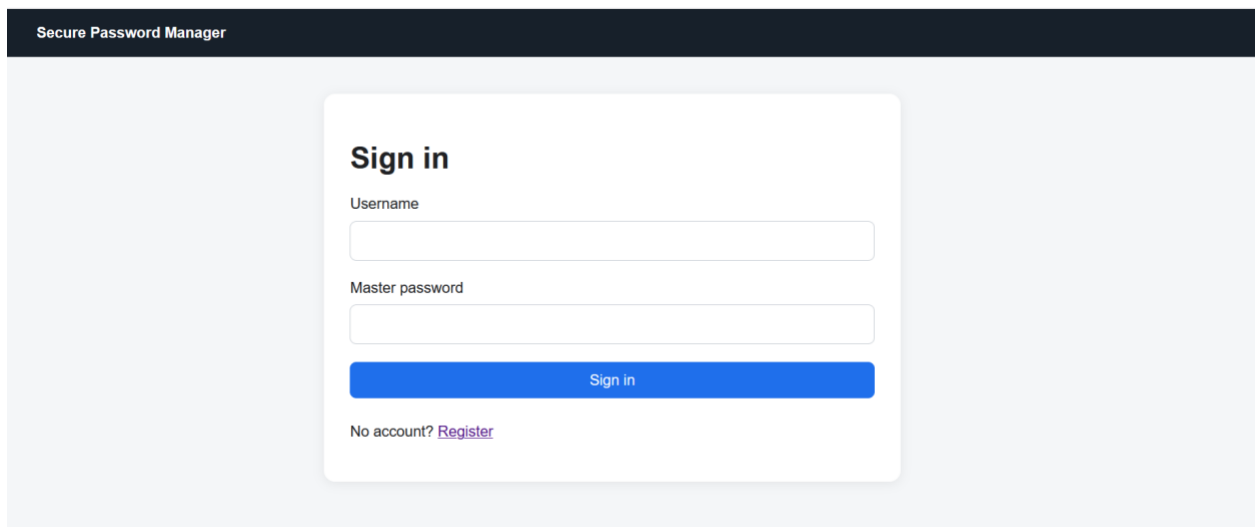

1. Select Create account.
2. Enter a username.
3. Create a master password which encompasses at least 12 characters, including uppercase and lowercase letters, a number, and a special character.
4. Confirm the password
5. Select Create account.

The screenshot shows the 'Create account' form within the 'Secure Password Manager' application. The form is centered on a light gray background. It has a dark blue header bar at the top with the text 'Secure Password Manager'. The form itself is a white card with a dark blue title 'Create account'. Below the title, there is a subtitle 'Create account. Minimum 12 characters.' followed by three input fields: 'Username' (containing 'John Doe'), 'Master password' (filled with dots), and 'Confirm password' (also filled with dots). At the bottom of the form is a blue button labeled 'Create account'.

4. Use the Password Vault

Sign in:

The screenshot shows the 'Sign in' form within the 'Secure Password Manager' application. The form is centered on a light gray background. It has a dark blue header bar at the top with the text 'Secure Password Manager'. The form itself is a white card with a dark blue title 'Sign in'. Below the title, there are two input fields: 'Username' and 'Master password'. At the bottom of the form is a blue button labeled 'Sign in'. Below the button, there is a link that says 'No account? [Register](#)'.
